

# Catalina Update

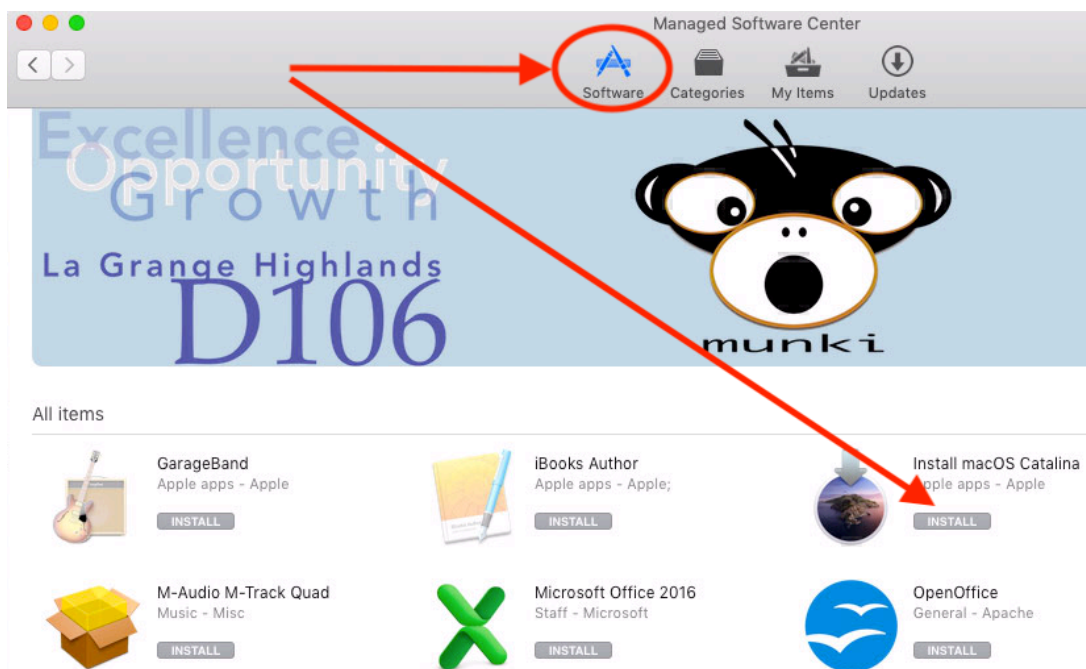

Thank you for helping the Tech Department update your machine to Catalina

1. Please make sure the laptop has at least **70% battery power** or is plugged into an outlet. (Remind the students to fully charge their laptops the night before updating.)

2. Open Managed Software Center and ensure that **all other munki updates** have completed.

**(\*\*Note: This may take a while if there are pending updates. \*\*)**

4. On the Software page, below “**Install macOS Catalina**”, click “**INSTALL**”.

**Additional Notes:** Leave the laptop in a safe place with the lid open. It will restart after about 5 minutes, and then take another 45 minutes or so to install macOS Catalina.

The installation **still** may take several minutes after logging in for the first time.
