

Big Sur Update

Thank you for helping the Tech Department update your machine to Big Sur.

1. Big Sur requires about **50GB** of disk space to be free (**35GB** if you already have the application Install macOS Big Sur in your Application folder). If you need to free up some disk space, there is an application on your computer called **Free Disk Space** that can help you (search for it in Spotlight). If you have problems freeing up enough space, contact the Help Desk.
2. Please make sure the laptop has at least **70% battery power** or is plugged into a power outlet. Leave the laptop in a safe place with the lid open after you start the below process.
3. Run the application **"Install D106 Big Sur"**
 - a. You can find this by searching in Spotlight or by looking in your Applications folder in the Finder.
 - b. If you do not have this application, please contact the Technology Department.
4. The laptop will restart after about 15 minutes. You can continue to use your laptop during this time period.
5. After the restart, it will take another 45 minutes to install macOS Big Sur. During this time, you will be unable to use your laptop.
6. You may need to reinstall the Canon Follow-Me printer after the update. You can do so by going to the district website -> School Life -> Printer Maps while you are inside one of the district buildings. (If you have problems, run "Fix My Computer" and try again.)

Please contact the Technology Department if you have any questions or difficulties.
